

STS2  
Double revolving safety door

The topic of safety is of growing importance nowadays. WALDNER has taken up this theme and can also offer a developed solution with its stainless steel safety doors.

The safety doors are tested according to DIN 18103 and are approved for ET 3 safety class. The robust finish and the five-fold locking mechanism offer sufficient security for all sensitive areas.

Works room rebate door,  
single or double

Stainless steel is even an interesting alternative for facades and entrances. The thermally separated profiles, which are used nowadays, are developed in such a way, that they are second to none of the other materials that have been used up until now e.g. aluminium.

Secure your walls with wall  
protection out of stainless steel

## Impact and Edge Protection Profiles

are an irresistible supplement for construction conservation.

Impact protection piles and rails for the protection of doors are part of this, as are tile connection and expansion joint profiles for floored areas, and edge protection rails for walls and piers.
